

*Over a million cell phone users will lose access to 9-1-1 on February 19, 2008. AT&T Mobility, Alltel, Cellular One, Dobson, US Cellular and Verizon Wireless and some other cellular providers will be turning off their analog networks.*

*This is a concern for people that have received older cellular phones from Donated Phone Programs. Many of these phones require the analog networks and recipients will not be able to contact 9-1-1 after the February cut-off date.*

*You will not be affected if you have a digital phone. You can tell if you have a digital phone if it has any of these capabilities:*

- If it has text or instant messaging capabilities*
- If it has Internet browsing capabilities*
- If it has an MP3 player or integrated camera*
- If it has a SIM card*

*Most cell phones that are over 5 years old are analog and service will be discontinued.*

*The National Emergency Number Association (NENA) advises that if you cannot tell if your phone will be affected by this change, you should take it to any local cellular phone retail location for assistance. They should be able to determine if a cellular phone is analog or digital.*

*If you are affected by this discontinuation of service, you may want to contact the Donated Phone Program that issued your phone.*
